Minneapolis, Minn.
ST. PAUL, MINN.

THE easiest, quickest, safest way to get all heavy lifting, moving and loading jobs done, is to let the "Little Giant" do them.

The "Little Giant" is stronger than three strong men. It will readily lift 1,000 pounds.

The "Little Giant" enables one man, single-handed, to easily and quickly handle the heaviest lifting chores—such as taking off or putting on hay-racks, pulling fence posts, stakes or stumps, loading logs, moving timbers, etc.

Think what it means to the farmer who has no hired men and can not afford them, to have a "Little Giant" always "Johnny-on-the-spot" to do his heavy lifting chores.

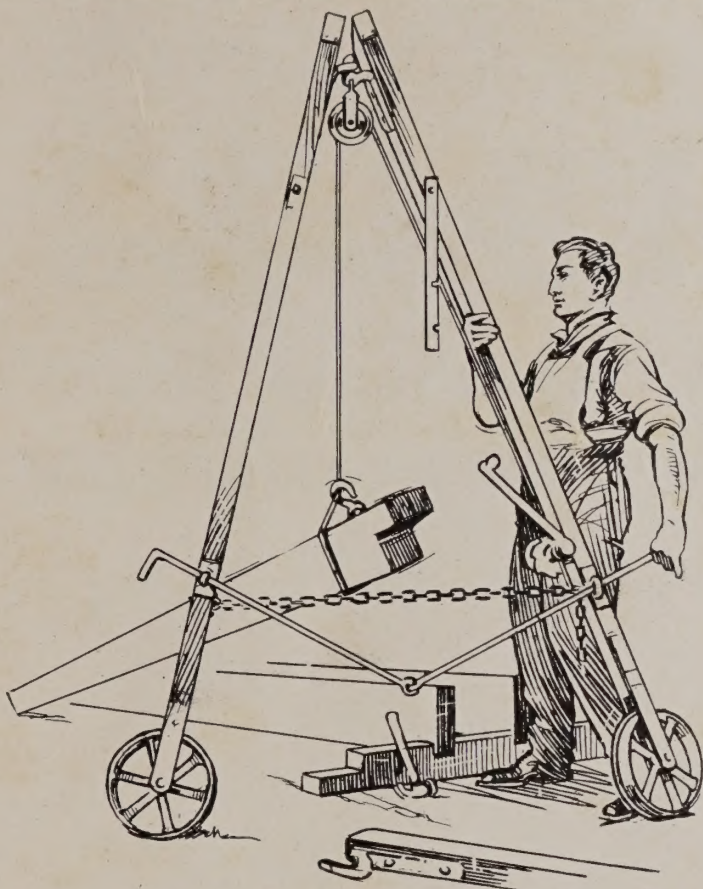

He does not have to risk seriously injuring himself, perhaps making himself a cripple for life, as many farmers have done, by over-exerting or straining himself.

He does not have to bother his neighbors for a "lift."

He does not have to leave the heavy chores undone for lack of help.

Also consider how valuable the "Little Giant" is on the larger farm, even where there are many hired men.

It does away with the necessity of calling in the men from the field to "give a hand" on heavy lifts—thus delaying the profit-making work of the farm

and causing a waste of time, effort and money all around.

The "Little Giant" will do the lifting chores easier, quicker, more efficiently than men can do them. It is easily wheeled around, quickly set up, easily managed by one man. Weighs only 70 lbs.

The "Little Giant" is a most helpful "hand" that any man can afford to hire, for it costs less than 25 cents a month, if it lasts five years. It will last much longer than five years, barring accidents. It is very substantially made of selected, tested materials.

How to Use the "Little Giant"

The third leg is provided for steadying the other two while you are raising the load.

The flat metal bar, swung on a pivot hinge near the top of one of the two main legs, is also provided to hold the legs rigid.

When you have raised the load to the desired

height, grasp the two main legs and raise them to a straight vertical position. The third leg will then drop to the ground, the weight of the load will hold the derrick steady and very little muscular effort will be required to hold the load or move it about.

Unhitch the angle iron bar near the top, retain your grip on one leg with your right hand, and grasp the steering bar with your left hand. You can then easily push the load around in any way you wish.

The "Little Giant" is Made to Last and Bear Strains

First, the "Little Giant" is perfect from every mechanical standpoint. As for the materials, the timbers are made of straight grain Washington fir—light, strong—almost ever-lasting. The wheels are of steel, so there is no chance for them to break by striking some hard object or from a jolt when carrying a load in cold weather. The windlass and pulley are of the finest malleable castings. The steel cable will stand a strain of at least twice the weight we advocate using the "Little Giant" to lift.

What Other Farmers Say About the "Little Giant"

"I have used your Portable Derrick and it has proven all that you claim for it. I am well pleased." John Hohanson, Bertha, Minn.

"I am well satisfied with the Portable Derrick which I bought of you. It has done every thing that you claim for it."
Luke McCoy, Savage, Minn.

"We are very well pleased with our Portable Derrick. It does the work."
John G. Huelskamp, New Ulm, Minn.

1. Showing how detachable third leg is placed in position.
2. Angle iron bar holds two main legs rigid when desired.
3. Chain keeps legs from spreading apart when No. 2 is not locked.
4. Steering Handles. 5. Windlass.

Some of the Chores the

LITTLE GIANT **PORTABLE DERRICK**

Will do Better than "Hands"

Shift heavy timbers or logs, load and unload them.

Take off and put on the hayrack or other bodies onto the wagon chassis.

Pull fence posts.

Help in digging out stumps.

Load and unload heavy articles.

Place joists in position in building operations.

Raise farm machinery that you want to inspect, adjust, repair or oil.

Remove big stones and boulders from places where you don't want them.

And there are dozens of other uses. Almost every day the "Little Giant" will be found a welcome guest, a lightener of your heavy burdens, a "Handy Andy" who helps you get the menial tasks done and out of the way, so that you'll have more time for the important things.
